PROFESSIONAL SUMMARY

B.Tech Computer Science student and full-stack developer who has shipped 3 production-grade AI/web platforms in the last 8 months, spanning React, Node.js, Django, and LLM-based systems (Llama 3, Groq API). Skilled at architecting scalable, secure applications and applying machine learning (Random Forest, TF-IDF) to solve real-world problems in resume screening, adaptive assessment, and coding education.

EDUCATION

B.Tech - (Computer Science & Technology), 2024-2028
LJ University, Ahmedabad

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, HTML5, CSS3
Frontend & Databases: Supabase, MongoDB, SQLite, Responsive Web Design, UI&UX Design
Frameworks & Libraries: Flask, React, Django, Node.js, Express, FastAPI
AI / Machine Learning: Llama 3, Groq LLM API, Random Forest, TF-IDF, Scikit-learn, Pandas
Tools & Platforms: Git, GitHub, VS Code, Browser Developer Tools
Other Skills: REST API Integration, Microservices Architecture, Authentication & Security

PROJECTS

CareerCompass – AI-Powered ATS Resume Tracker & Job Matcher June 2026

Tech Stack: React.js, Node.js, Django, Groq LLaMA 3.1, Scikit-learn

Architected a dual-service platform separating core app logic from AI/ML processing, reducing manual resume screening time from 10 minutes to 1-1.5 minutes per resume and enabling independent scaling of each service. Engineered NLP and ML pipelines (Groq LLaMA 3.1, Random Forest, TF-IDF) to automate resume screening and job matching, validated against 60+ test resumes during development. Designed secure authentication and a two-sided portal experience for candidates and recruiters.

AI PDF-to-MCQ Generator March 2026

Tech Stack: FastAPI, React, Llama 3, Groq

Built an LLM-powered assessment system converting large PDFs into adaptive MCQs at scale, using streaming-based extraction to handle large documents reliably. Implemented JWT authentication and retry handling for reliable performance under load, with usage analytics to track engagement. Integrated an AI tutor, flashcards, leaderboard tracking, and wrong-answer analysis workflows to support adaptive learning.

Begin2Code – Coding Learning Platform January 2026

Tech Stack: HTML, CSS, JavaScript, Python, Flask, Supabase

Developed a responsive coding-education platform for beginner programmers, optimized for multiple devices. Integrated Supabase-backed database and backend logic to power dynamic user interactions, and deployed the application to production as a live, working product.

CERTIFICATES

Exploratory Data Analysis for Machine Learning, Issued by IBM May 2026

Introduction to HTML, CSS & JavaScript, Issued by IBM December 2025

Inheritance and Data Structures in Java, Issued by Penn University July 2025

Introduction to Java, Issued by LearnQuest December 2024
